

NORTH YORKSHIRE COUNTY COUNCIL

PENSION FUND COMMITTEE

4 MARCH 2022

BORDER TO COAST RESPONSIBLE INVESTMENT POLICIES

Report of the Treasurer

1. PURPOSE OF REPORT

- 1.1. To present the responsible investment policies of Border to Coast and ask Members for their comments.

2. INTRODUCTION

- 2.1. Border to Coast first published a Responsible Investment Policy and a Corporate Governance & Voting Guidelines document in 2018, shortly after the company commenced investment operations.
- 2.2. These documents were the crystallisation of extensive discussions between Border to Coast and the eleven partner funds. They set out the Border to Coast approach, and were broadly aligned to the responsible investment policies of each partner fund.
- 2.3. Every year these documents are reviewed to ensure that they reflect best practice, and capture Border to Coast's current view and the views of partner funds. The review process is led by Border to Coast and is carried out in consultation with partner fund officers. This ensures that Border to Coast can present a strong and unified voice when undertaking responsible investment activities such as company engagement and voting shares.
- 2.4. The latest review was completed in November 2021. This included an evaluation by Robeco, Border to Coast's adviser on responsible investment issues, using the International Corporate Governance Network Global Governance Principles, the UK Stewardship Code and the UN Principles of Responsible Investment as benchmarks.
- 2.5. Due to the increasing importance of climate change risk, a Climate Change Policy was created in 2021, to stand alongside the Responsible Investment Policy and the Corporate Governance & Voting Guidelines.
- 2.6. The Joint Committee has reviewed these documents, and supported Border to Coast's request that the Pension Fund Committees of partner funds be asked to comment on them.
- 2.7. Comments on these documents will also be useful in the review of the Responsible Investment Policy of the North Yorkshire Pension Fund, which

will take place over the next few months, with the Policy due to be presented at the Committee's meeting in July.

3. RESPONSIBLE INVESTMENT POLICY

3.1. The Responsible Investment Policy is attached as **Appendix A**. There were no major changes to this document as it reflects a gradual evolution of thinking. The main changes, with references to the associated paragraphs are:

- additional wording on diversity and diversity of thought (1.0, Introduction)
- a new section on property, in advance of the launch of the global property fund, expected in late 2022 (5.4, Real Estate)
- significant editing of the section on climate change, which is now covered in more detail in the Climate Change Policy (5.6, Climate Change)
- additional wording on the potential for exclusions relating to companies involved in tar sands or coal, where business models are considered incompatible with the transition to a low carbon economy (5.6, Climate Change)
- a comment on the new Stewardship Code (6.0, Stewardship)
- a new section on key engagement themes, to describe the areas where efforts will be focussed in 2022 (6.2.1, Engagement Themes)

3.2. The engagement theme areas are low carbon transition, waste and water management, social inclusion through labour management and diversity of thought.

3.3. The low carbon transition engagement theme will focus on high emitting sectors where companies will need to adapt or fundamentally change their business models. This will also cover banks identified as key to financing the transition to a low carbon economy.

3.4. The waste and water management theme will focus on companies with packaging waste which is a huge environmental issue and is coming under increasing regulation, and those with high exposure to water intensive operations.

3.5. The social inclusion through labour management theme will target companies with labour intensive operations and with supply chain labour management risk, which have been put under added pressure by the pandemic.

3.6. The diversity of thought theme will focus on companies with boards which could be enhanced by broader perspectives, to improve decision making, resilience and long-term sustainability.

5. CORPORATE GOVERNANCE & VOTING GUIDELINES

5.1. The Corporate Governance & Voting Guidelines is attached as **Appendix B**. As above, there were no major changes, but the main changes were:

- strengthening the approach to ethnic diversity at FTSE 100 companies (pages 4 and 5, Diversity)
- separation of treatment of long-term incentive schemes for executives and other employees (page 8, Long Term Incentives)
- a clarification in relation to executive pensions (page 8, Directors Contracts)
- additional wording in relation to the stance on climate change lobbying (page 10, Lobbying)
- a clarification on shareholder proposals and their alignment with shareholders best interests (page 12, Shareholder Proposals)
- strengthening the stance on climate change to include Climate Action 100+ net zero benchmark indicators (page 12, Climate Change)

6. CLIMATE CHANGE POLICY

6.1. The Climate Change Policy is attached as **Appendix C**. It is based on the internationally recognised Net Zero Investment Framework, which provides a set of recommended actions, metrics and methodologies to help organisations become carbon neutral by 2050 or sooner.

6.2. The Policy breaks the approach to addressing this risk into four pillars:

- identification and assessment – integrating climate risks into the wider risk management framework and having robust processes to identify these risks and assess them over time
- investment strategy – fully embedding climate change risk in the investment decision making process, including the approach to investment opportunities
- engagement and advocacy – influencing companies to adapt their climate change strategies so that they are well prepared for the transition to a low carbon economy
- disclosure and reporting – transparency on climate change issues and activities

6.3. The Policy sets the high-level approach. Border to Coast expect to set out their implementation plan towards the end of 2022, including determining the metrics and milestones they will use to assess progress.

7. RECOMMENDATIONS

7.1. Members are asked to comment on Border to Coast's Responsible Investment Policy, Corporate Governance & Voting Guidelines document and Climate Change Policy.

Responsible Investment Policy

Border to Coast Pensions Partnership

November 2021

Responsible Investment Policy

This Responsible Investment Policy details the approach that Border to Coast Pensions Partnership will follow in fulfilling its commitment to our Partner Funds in their delegation of the implementation of certain responsible investment (RI) and stewardship responsibilities.

1. Introduction

Border to Coast Pensions Partnership Ltd is an FCA-authorized investment fund manager (AIFM). It operates investment funds for its eleven shareholders which are Local Government Pension Scheme funds (Partner Funds). The purpose is to make a difference to the investment outcomes for our Partner Funds through pooling to create a stronger voice; working in partnership to deliver cost effective, innovative, and responsible investment now and into the future; thereby enabling great, sustainable performance.

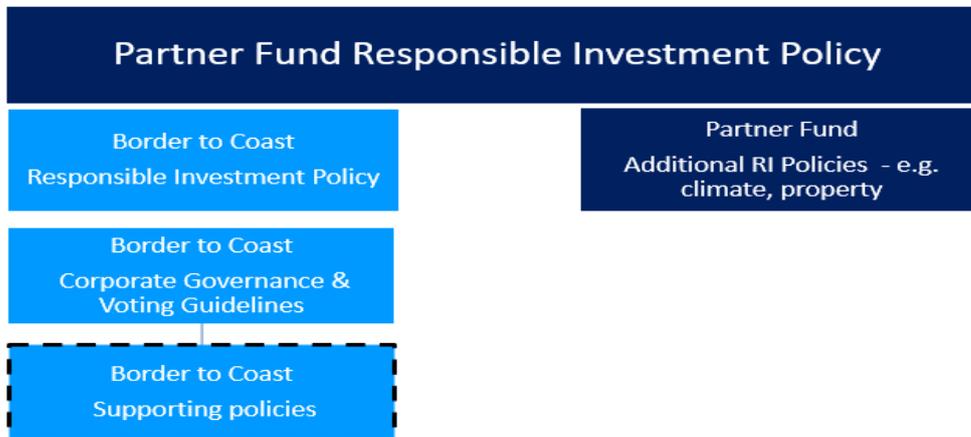

Border to Coast takes a long-term approach to investing and believes that businesses that are governed well, have a diverse board and run in a sustainable way are more resilient, able to survive shocks and have the potential to provide better financial returns for investors. Diversity of thought and experience on boards is significant for good governance, reduces the risk of 'group think' leading to better decision making. Environmental, social and governance (ESG) issues can have a material impact on the value of financial assets and on the long-term performance of investments, and therefore need to be considered across all asset classes in order to better manage risk and generate sustainable, long-term returns. Well-managed companies with strong governance are more likely to be successful long-term investments.

Border to Coast is an active owner and steward of its investments, both internally and externally managed, across all asset classes. The commitment to responsible investment is communicated in the Border to Coast UK Stewardship Code compliance statement. As a long-term investor and representative of asset owners, we will hold companies and asset managers to account regarding environmental, societal and governance factors that have the potential to impact corporate value. We will incorporate such factors into our investment analysis and decision making, enabling long-term sustainable investment performance for our Partner Funds. As a shareowner, Border to Coast has a responsibility for effective stewardship of the companies it invests in, whether directly or indirectly through mandates with fund managers. It will practice active ownership through voting, monitoring companies, engagement and litigation.

1.1. Policy framework

The LGPS (Management and Investment of Funds) 2016 regulations state that the responsibility for stewardship, which includes shareholder voting, remains with the Partner Funds. Stewardship day-to-day administration and implementation have been delegated to Border to Coast by the Partner Funds, on assets managed by Border to Coast, with appropriate monitoring and challenge to ensure this continues to be in line with Partner Fund requirements. To leverage scale and for operational purposes, Border to Coast has, in conjunction with Partner Funds, developed this RI Policy and accompanying Corporate Governance & Voting Guidelines to ensure clarity of approach on behalf of Partner Funds. This collaborative approach results in an RI policy framework illustrated below with the colours demonstrating ownership of the various aspects of the framework:

RI Policy Framework

2. What is responsible investment?

Responsible investment (RI) is the practice of incorporating ESG issues into the investment decision making process and practicing investment stewardship, to better manage risk and generate sustainable, long-term returns. Financial and ESG analysis together identify broader risks leading to better informed investment decisions and can improve performance as well as risk-adjusted returns.

Investment stewardship includes active ownership, using voting rights, engaging with investee companies, influencing regulators and policy makers, and collaborating with other investors to improve long-term performance.

3. Governance and Implementation

Border to Coast takes a holistic approach to sustainability and as such it is at the core of our corporate and investment thinking. Sustainability, which includes RI, is considered and overseen by the Board and Executive Committees. Specific policies and procedures are in place to demonstrate the commitment to RI, which include the Responsible Investment Policy and Corporate Governance & Voting Guidelines (available on the [website](#)). Border to Coast has dedicated staff resources for managing RI within the organisational structure.

The RI Policy is owned by Border to Coast and created after collaboration and engagement with our eleven Partner Funds. The Chief Investment Officer (CIO) is accountable for implementation of the policy. The policy is monitored with regular reports to the CIO, Investment Committee, Board, Joint Committee and Partner Funds. It is reviewed at least annually or whenever revisions are proposed, taking into account evolving best practice, and updated, as necessary.

4. Skills and competency

Border to Coast will, where needed, take proper advice in order to formulate and develop policy. The Board and staff will maintain appropriate skills in responsible investment and stewardship through continuing professional development; where necessary expert advice will be taken from suitable RI specialists to fulfil our responsibilities.

5. Integrating RI into investment decisions

Border to Coast considers material ESG factors when analysing potential investments. ESG factors tend to be longer term in nature and can create both risks and opportunities. It is therefore important that, as a long-term investor, we take them into account when analysing potential investments.

The factors considered are those which could cause financial and reputational risk, ultimately resulting in a reduction in shareholder value. ESG issues will be considered and monitored in relation to both internally and externally managed assets. The CIO will be accountable for the integration and implementation of ESG considerations. Issues considered include, but are not limited to:

Environmental	Social	Governance	Other
Climate change Resource & energy management Water stress Single use plastics Biodiversity	Human rights Child labour Supply chain Human capital Employment standards	Board independence/ diversity Executive pay Tax transparency Auditor rotation Succession planning Shareholder rights	Business strategy Risk management Cyber security Data privacy Bribery & corruption Political lobbying

Whilst the specific aspects and form of ESG integration and stewardship vary across asset class, the overarching principles outlined in this policy are applied to all internally and externally managed assets of Border to Coast. More information on specific approaches is outlined below.

5.1. Listed equities (Internally managed)

Border to Coast looks to understand and evaluate the ESG-related business risks and opportunities companies face. We consider the integration of ESG factors into the investment process as a necessary complement to the traditional financial evaluation of assets; this results in a more informed investment decision-making process. Rather than being used to preclude certain investments, it is used to provide an additional context for stock selection.

ESG data and research from specialist providers is used alongside general stock and sector research; it is an integral part of the research process and when considering portfolio construction, sector analysis and stock selection. The Head of RI works with colleagues to ensure they are knowledgeable and fully informed on ESG issues. Voting and engagement should not be detached from the investment process; therefore, information from engagement meetings will be shared with the team to increase and maintain knowledge, and portfolio managers will be involved in the voting process.

5.2. Private markets

Border to Coast believes that ESG risk forms an integral part of the overall risk management framework for private market investment. An appropriate ESG strategy will improve downside protection and help create value in underlying portfolio companies. Border to Coast takes the following approach to integrating ESG into the private market investment process:

- The assessment of ESG issues is integrated into the investment process for all private market investments.

- A manager's ESG strategy is assessed through a specific ESG questionnaire agreed with the Head of RI and reviewed by the alternatives investment team with support from the Head of RI as required.
- Managers are requested to report annually on the progress and outcomes of ESG related values and any potential risks.
- Ongoing monitoring includes identifying any possible ESG breaches and following up with the managers concerned.
- Work with managers to improve ESG policies and ensure the approach is in-line with developing industry best practice.

5.3. Fixed income

ESG factors can have a material impact on the investment performance of bonds, both negatively and positively, at the issuer, sector and geographic levels. ESG analysis is therefore incorporated into the investment process for corporate and sovereign issuers to manage risk. The challenges of integrating ESG in practice are greater than for equities with the availability of data for some markets lacking.

The approach to engagement also differs as engagement with sovereigns is much more difficult than with companies. Third-party ESG data is used along with information from sources including UN bodies, the World Bank and other similar organisations. This together with traditional credit analysis is used to determine a bond's credit quality. Information is shared between the equity and fixed income teams regarding issues which have the potential to impact corporates and sovereign bond performance.

5.4. Real estate

Border to Coast is considering making Real Estate investments through both direct properties and real estate funds. For real estate funds, a central component of the fund selection/screening process will be reviewing the General Partner and Fund/Investment Manager's Responsible Investment and ESG approach and policies. Key performance indicators will be energy performance measurement, flood risk and rating systems such as GRESB (formerly known as the Global Real Estate Sustainability Benchmark), and BREEAM (Building Research Establishment Environmental Assessment Method). Our process will review the extent to which they are used in asset management strategies. We are in the process of developing our ESG and RI strategies for direct investment which will involve procuring a third-party manager and working with them to develop a best-in-class approach to managing ESG risks.

5.5. External manager selection

RI is incorporated into the external manager appointment process including the request for proposal (RFP) criteria and scoring and the investment management agreements. The RFP includes specific requirements relating to the integration of ESG by managers into the investment process and to their approach to engagement. We expect to see evidence of how material ESG issues are considered in research analysis and investment decisions. Engagement needs to be structured with clear aims, objectives and milestones.

Voting is carried out by Border to Coast for both internally and externally managed equities where possible and we expect external managers to engage with companies in alignment with the Border to Coast RI policy.

The monitoring of appointed managers will also include assessing stewardship and ESG integration in accordance with our policies. All external fund managers will be expected to be signatories or comply with international standards applicable to their geographical location. We will encourage managers to become signatories to the UN-supported Principles for Responsible Investment. Managers will be required to report to Border to Coast on their RI activities quarterly.

5.6. Climate change

The world is warming, the climate is changing, and the scientific consensus is that this is due to human activity, primarily the emissions of carbon dioxide (CO₂) from burning fossil fuels. We support this scientific consensus; recognising that the investments we make, in every asset class, will both impact climate change and be impacted by climate change. We actively consider how climate change, the shifting regulatory environment and potential macroeconomic impact will affect investments. We believe that we have the responsibility to contribute and support the transition to a low carbon economy in order to positively impact the world in which pension scheme beneficiaries live in.

Climate change is a systemic risk with potential financial impacts associated with the transition to a low-carbon economy and physical impacts under different climate scenarios. Transition will affect some sectors more than others, notably energy, utilities and sectors highly reliant on energy. However, within sectors there are likely to be winners and losers which is why divesting from and excluding entire sectors may not be appropriate.

We believe that using our influence through ongoing engagement with companies, rather than divestment, drives positive outcomes. This is fundamental to our responsible investment approach. Our investment approach is not to divest or exclude entire sectors, however there may be specific instances when we will look to sell or not invest in some industries based on investment criteria, the investment time horizon and the likelihood for success in influencing company strategy and behaviour. Using these criteria and due to the potential for stranded assets, we interpret this to cover pure coal and tar sands companies and will therefore not invest in these companies. Any companies excluded will be monitored and assessed for progress and potential reinstatement at least annually.

Detail on Border to Coast's approach to managing the risks and opportunities associated with climate change can be found in our Climate Change Policy on our website.

6. Stewardship

As a shareholder Border to Coast has a responsibility for effective stewardship of the companies it invests in, whether directly or indirectly through mandates with fund managers. It practises active ownership through the full use of rights available including voting, monitoring companies, engagement and litigation. As a responsible shareholder, we are committed to being a signatory to the 2020 UK Stewardship Code¹ and have made an application to become a signatory by submitting our 2021 Responsible Investment & Stewardship Report to the

¹ The UK Stewardship Code aims to enhance the quality of engagement between investors and companies to help improve long-term risk-adjusted returns to shareholders. <https://www.frc.org.uk/directors/corporate-governance-and-stewardship>

Financial Reporting Council; we are also a signatory to the UN-supported Principles of Responsible Investment².

6.1. Voting

Voting rights are an asset and Border to Coast will exercise its rights carefully to promote and support good corporate governance principles. It will aim to vote in every market in which it invests where this is practicable. To leverage scale and for practical reasons, Border to Coast has developed a collaborative voting policy to be enacted on behalf of the Partner Funds which can be viewed on our [website](#) at: Corporate Governance & Voting Guidelines. Where possible the voting policies will also be applied to assets managed externally. Policies will be reviewed annually in collaboration with the Partner Funds. There may be occasions when an individual fund may wish Border to Coast to vote its pro rata holding contrary to an agreed policy; there is a process in place to facilitate this. A Partner Fund wishing to diverge from this policy will provide clear rationale in order to meet the governance and control frameworks of both Border to Coast and, where relevant, the Partner Fund.

6.1.1. Use of proxy advisors

Border to Coast appointed Robeco as Voting and Engagement provider to implement the set of detailed voting guidelines and ensure votes are executed in accordance with policies.

A proxy voting platform is used with proxy voting recommendations produced for all meetings voted managed by Robeco as the Voting & Engagement provider. Robeco's proxy voting advisor (Glass Lewis Co) provides voting recommendations based upon Border to Coast's Corporate Governance & Voting Guidelines ('the Voting Guidelines'). A Robeco team of dedicated voting analysts analyse the merit of each agenda item to ensure voting recommendations are aligned with the Voting Guidelines. Border to Coast's Investment Team receives notification of voting recommendations ahead of meetings which are assessed on a case-by-case basis by portfolio managers and responsible investment staff prior to votes being executed. A degree of flexibility is required when interpreting the Voting Guidelines to reflect specific company and meeting circumstances, allowing the override of voting recommendations from the proxy adviser.

Robeco evaluates their proxy voting agent at least annually, on the quality of governance research and the alignment of customised voting recommendations and Border to Coast's Voting Guidelines. This review is part of Robeco's control framework and is externally assured. Border to Coast also monitors the services provided by Robeco monthly, with a six monthly and full annual review.

Border to Coast has an active stock lending programme. Where stock lending is permissible, lenders of stock do not generally retain any voting rights on lent stock. Procedures are in place to enable stock to be recalled prior to a shareholder vote. Stock will be recalled ahead of meetings, and lending can also be restricted, when any, or a combination of the following, occur:

- The resolution is contentious.
- The holding is of a size which could potentially influence the voting outcome.
- Border to Coast needs to register its full voting interest.

² The UN-supported Principles for Responsible Investment (PRI) is the world's leading advocate for responsible investment enabling investors to publicly demonstrate commitment to responsible investment with signatories committing to supporting the six principles for incorporating ESG issues into investment practice.

- Border to Coast has co-filed a shareholder resolution.
- A company is seeking approval for a merger or acquisition.
- Border to Coast deems it appropriate.

Proxy voting in some countries requires share blocking. This requires shareholders who want to vote their proxies to deposit their shares before the date of the meeting (usually one day after cut-off date) with a designated depository until one day after meeting date.

During this blocking period, shares cannot be sold; the shares are then returned to the shareholders' custodian bank. We may decide that being able to trade the stock outweighs the value of exercising the vote during this period. Where we want to retain the ability to trade shares, we may refrain from voting those shares.

Where appropriate Border to Coast will consider co-filing shareholder resolutions and will notify Partner Funds in advance. Consideration will be given as to whether the proposal reflects Border to Coast's Responsible Investment policy, is balanced and worded appropriately, and supports the long-term economic interests of shareholders.

6.2. Engagement

The best way to influence companies is through engagement; therefore, Border to Coast will not divest from companies principally on social, ethical or environmental reasons. As responsible investors, the approach taken will be to influence companies' governance standards, environmental, human rights and other policies by constructive shareholder engagement and the use of voting rights.

The services of specialist providers may be used when necessary to identify issues of concern. Meeting and engaging with companies are an integral part of the investment process. As part of our stewardship duties, we monitor investee companies on an ongoing basis and take appropriate action if investment returns are at risk. Engagement takes place between portfolio managers and investee companies across all markets where possible.

Border to Coast has several approaches to engaging with investee holdings:

- Border to Coast and all eleven Partner Funds are members of the LAPFF. Engagement takes place with companies on behalf of members of the Forum across a broad range of ESG themes.
- We will seek to work collaboratively with other like-minded investors and bodies in order to maximise Border to Coast's influence on behalf of Partner Funds, particularly when deemed likely to be more effective than acting alone. This will be achieved through actively supporting investor RI initiatives and collaborating with various other external groups e.g. LAPFF, the Institutional Investors Group on Climate Change, other LGPS pools and other investor coalitions.
- Due to the proportion of assets held in overseas markets it is imperative that Border to Coast is able to engage meaningfully with global companies. To enable this and complement other engagement approaches, an external voting and engagement service provider has been appointed. Border to Coast provides input into new engagement themes which are considered to be materially financial, selected by the external engagement provider on an annual basis, and also participates in some of the engagements undertaken on our behalf.

- Engagement will take place with companies in the internally managed portfolios with portfolio managers and the Responsible Investment team engaging directly across various engagement streams; these will cover environmental, social, and governance issues as well as UN Global Compact³ breaches or OECD Guidelines⁴ for Multinational Enterprises breaches.
- We will expect external managers to engage with investee companies and bond issuers as part of their mandate on our behalf and in alignment with our RI policy.

Engagement conducted can be broadly split into two categories: engagement based on financially material ESG issues, or engagement based on (potential) violations of global standards such as the UN Global Compact or OECD Guidelines for Multinational Enterprises.

When engagement is based on financially material ESG issues, engagement themes and companies are selected in cooperation with our engagement service provider based on an analysis of financial materiality. Such companies are selected based on their exposure to the engagement topic, the size and relevance in terms of portfolio positions and related risk.

For engagement based on potential company misconduct, cases are selected through the screening of news flows to identify breaches of the UN Global Compact Principles or OECD Guidelines for Multinational Enterprises. Both sets of principles cover a broad variety of basic corporate behaviour norms around ESG topics. Portfolio holdings are screened on 1) validation of a potential breach, 2) the severity of the breach and 3) the degree of to which management can be held accountable for the issue. For all engagements, SMART⁵ engagement objectives are defined.

In addition, internal portfolio managers and the Responsible Investment team monitor holdings which may lead to selecting companies where engagement may improve the investment case or can mitigate investment risk related to ESG issues. Members of the investment team have access to our engagement provider's Active Ownership profiles and engagement records. This additional information feeds into the investment analysis and decision making process.

We engage with regulators, public policy makers, and other financial market participants as and when required. We encourage companies to improve disclosure in relation to ESG and to report and disclose in line with the TCFD recommendations.

6.2.1. Engagement themes

Recognising that we are unable to engage on every issue, we focus our efforts on areas that are deemed to be the most material to our investments - our key engagement themes. These are used to highlight our priority areas for engagement which includes working with our Voting and Engagement provider and in considering collaborative initiatives to join. We do however engage more widely via the various channels including LAPFF and our external managers.

³ UN Global Compact is a shared framework covering 10 principles, recognised worldwide and applicable to all industry sectors, based on the international conventions in the areas of human rights, labour standards, environmental stewardship and anti-corruption.

⁴ OECD Guidelines for Multinational Enterprises are recommendations providing principles and standards for responsible business conduct for multinational corporations operating in or from countries adhering to the OECD Declaration on International and Multinational Enterprises.

⁵ SMART objectives are: specific, measurable, achievable, relevant and time bound.

Key engagement themes are reviewed on a three yearly basis using our Engagement Theme Framework. There are three principles underpinning this framework:

- that progress in the themes is expected to have a material financial impact on our investment portfolios in the long-term;
- that the voice of our Partner Funds should be a part of the decision; and
- that ambitious, but achievable milestones can be set through which we can measure progress over the period.

When building a case and developing potential new themes we firstly assess the material ESG risks across our portfolios and the financial materiality. We also consider emerging ESG issues and consult with our portfolio managers and Partner Funds. The outcome is for the key themes to be relevant to the largest financially material risks; for engagement to have a positive impact on ESG and investment performance; to be able to demonstrate and measure progress; and for the themes to be aligned with our values and important to our Partner Funds.

The key engagement themes following the 2021 review are:

- Low Carbon Transition
- Diversity of thought
- Waste and water management
- Social inclusion through labour management

6.2.2. Escalation

Border to Coast believe that engagement and constructive dialogue with the companies in which it invests is more effective than excluding companies from the investment universe. However, if engagement does not lead to the desired result escalation may be necessary. A lack of responsiveness by the company can be addressed by conducting collaborative engagement with other institutional shareholders, registering concern by voting on related agenda items at shareholder meetings, attending a shareholder meeting in person and filing/co-filing a shareholder resolution. If the investment case has been fundamentally weakened, the decision may be taken to sell the company's shares.

6.3. Due diligence and monitoring procedure

Internal procedures and controls for stewardship activities are reviewed by Border to Coast's external auditors as part of the audit assurance (AAF) control review. Robeco, as the external Voting and Engagement provider, is also monitored and reviewed by Border to Coast on a regular basis to ensure that the service level agreement is met.

Robeco also undertakes verification of its active ownership activities. Robeco's external auditor audits active ownership controls on an annual basis; this audit is part of the annual International Standard for Assurance Engagements control.

7. Litigation

Where Border to Coast holds securities, which are subject to individual or class action securities litigation, we will, where appropriate, participate in such litigation. There are various litigation routes available dependent upon where the company is registered. We will use a case-by-case approach to determine whether or not to participate in a class action after having considered the risks and potential benefits. We will work with industry professionals to facilitate this.

8. Communication and reporting

Border to Coast will be transparent with regard to its RI activities and will keep beneficiaries and stakeholders informed. This will be done by making publicly available RI and voting policies; publishing voting activity on our [website](#) quarterly; reporting on engagement and RI activities to the Partner Funds quarterly; and in our annual RI report.

We also report in line with the TCFD recommendations.

9. Training and assistance

Border to Coast will offer the Partner Funds training on RI and ESG issues. Where requested, assistance will be given on identifying ESG risks and opportunities in order to help develop individual fund policies and investment principles for inclusion in the Investment Strategy Statements.

The Investment Team receive training on RI and ESG issues with assistance and input from our Voting & Engagement Partner and other experts where required. Training is also provided to the Border to Coast Board and the Joint Committee as and when required.

10. Conflicts of interest

Border to Coast has a suite of policies which cover any potential conflicts of interest between itself and the Partner Funds which are applied to identify and manage any conflicts of interest.

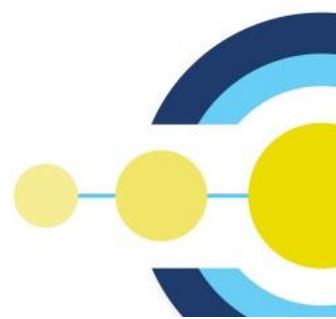

Corporate Governance & Voting Guidelines

Border to Coast Pensions Partnership

PENSIONS PARTNERSHIP

November 2021

1. Introduction

Border to Coast Pensions Partnership believes that companies operating to higher standards of corporate governance along with environmental and social best practice have greater potential to protect and enhance investment returns. As an active owner Border to Coast will engage with companies on environmental, social and governance (ESG) issues and exercise its voting rights at company meetings. When used together, voting and engagement can give greater results.

An investment in a company not only brings rights but also responsibilities. The shareholders' role includes appointing the directors and auditors and to be assured that appropriate governance structures are in place. Good governance is about ensuring that a company's policies and practices are robust and effective. It defines the extent to which a company operates responsibly in relation to its customers, shareholders, employees, and the wider community. Corporate governance goes hand-in-hand with responsible investment and stewardship. Border to Coast considers the UK Corporate Governance Code and other best practice global guidelines in formulating and delivering its policy and guidelines.

2. Voting procedure

These broad guidelines should be read in conjunction with the Responsible Investment Policy. They provide the framework within which the voting guidelines are administered and assessed on a case-by-case basis. A degree of flexibility will be required when interpreting the guidelines to reflect specific company and meeting circumstances. Voting decisions are reviewed with the portfolio managers. Where there are areas of contention the decision on voting will ultimately be made by the Chief Executive Officer. A specialist proxy voting advisor is employed to ensure that votes are executed in accordance with the policy.

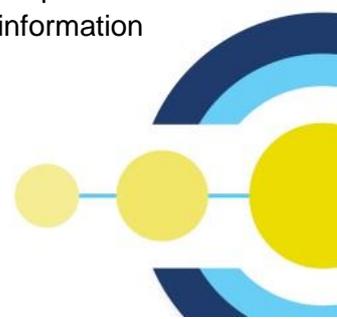

Where a decision has been made not to support a resolution at a company meeting, Border to Coast will, where able, engage with the company prior to the vote being cast. In some instances, attendance at AGMs may be required.

Border to Coast discloses its voting activity on its website and to Partner Funds on a quarterly basis.

We will support incumbent management wherever possible but recognise that the neglect of corporate governance and corporate responsibility issues could lead to reduced shareholder returns.

We will vote **For**, **Abstain** or **Oppose** on the following basis:

- We will support management that acts in the long-term interests of all shareholders, where a resolution is aligned with these guidelines and considered to be in line with best practice.
- We will abstain when a resolution fails the best practice test but is not considered to be serious enough to vote against.
- We will vote against a resolution where corporate behaviour falls short of best practice or these guidelines, or where the directors have failed to provide sufficient information to support the proposal.

3. Voting Guidelines

Company Boards

The composition and effectiveness of the board is crucial to determining corporate performance, as it oversees the running of a company by its managers and is accountable to shareholders. Company behaviour has implications for shareholders and other stakeholders. The structure and composition of the board may vary between different countries; however, we believe that the following main governance criteria are valid across the globe.

Composition and independence

The board should have a balance of executive and non-executive directors so that no individual or small group of individuals can control the board's decision making. They should possess a suitable range of skills, experience and knowledge to ensure the company can meet its objectives. Boards do not need to be of a standard size: different companies need different board structures, and no simple model can be adopted by all companies.

The board of large cap companies, excluding the Chair, should consist of a majority of independent non-executive directors although local market practices shall be taken into account. Controlled companies should have a majority of independent non-executive directors, or at least one-third independent directors on the board. As non-executive directors have a fiduciary duty to represent and act in the best interests of shareholders and to be objective and impartial when considering company matters, the board must be able to demonstrate their independence. Non-executive directors who have been on the board for a significant length of time, from nine to twelve years (depending on market practice) have been associated with the company for long enough to be presumed to have a close relationship with the business or fellow directors. We aspire for a maximum tenure of nine years but will review resolutions on a case-by-case basis where the local corporate governance code recommends a maximum tenure between nine and twelve years.

The nomination process of a company should therefore ensure that potential risks are restricted by having the right skills mix, competencies and independence at both the supervisory and executive board level. It is essential for boards to achieve an appropriate balance between tenure and experience, whilst not compromising the overall independence of the board. The re-nomination of board members with longer tenures should be balanced out by the nomination of members able to bring fresh perspectives. It is recognised that excessive length of tenure can be an issue in some markets, for example the US where it is common to have a retirement age limit in place rather than length of tenure. In such cases it is of even greater importance to have a process to robustly assess the independence of long tenured directors. Where it is believed an individual can make a valuable and independent contribution, tenure greater than nine years will be assessed on a case-by-case basis.

The company should, therefore, have a policy on tenure which is referenced in its annual report and accounts. There should also be sufficient disclosure of biographical details so that shareholders can make informed decisions. There are a number of factors which could affect independence, which includes but is not restricted to:

- Representing a significant shareholder.
- Serving on the board for over nine years.
- Having had a material business relationship with the company in the last three years.

- Having been a former employee within the last five years.
- Family relationships with directors, senior employees or advisors.
- Cross directorships with other board members.
- Having received or receiving additional remuneration from the company in addition to a director's fee, participating in the company's share option or performance-related pay schemes, or being a member of the company's pension scheme.

Leadership

The role of the Chair is distinct from that of other board members and should be seen as such. The Chair should be independent upon appointment and should not have previously been the CEO. The Chair should also take the lead in communicating with shareholders and the media. However, the Chair should not be responsible for the day-to-day management of the business: that responsibility rests with the Chief Executive. The role of Chair and CEO should not be combined as different skills and experience are required. There should be a distinct separation of duties to ensure that no one director has unfettered decision making power.

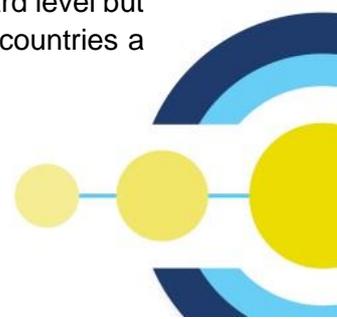

However, Border to Coast recognises that in many markets it is still common to find these positions combined. Any company intending to combine these roles must justify its position and satisfy shareholders in advance as to how the dangers inherent in such a combination are to be avoided; best practice advocates a separation of the roles. A senior independent non-executive director should be appointed, in-line with local corporate governance best practice, if roles are combined to provide shareholders and directors with a meaningful channel of communication, to provide a sounding board for the chair and to serve as an intermediary for the other directors and shareholders. Led by the senior independent director, the non-executive directors should meet without the chair present at least annually to appraise the chair's performance.

Non-executive Directors

The role of non-executive directors is to challenge and scrutinise the performance of management in relation to company strategy and performance. To do this effectively they need to be independent; free from connections and situations which could impact their judgement. They must commit sufficient time to their role to be able to carry out their responsibilities. A senior independent non-executive director should be appointed to act as liaison between the other non-executives, the Chair and other directors where necessary.

Diversity

Board members should be recruited from as broad a range of backgrounds and experiences as possible. A diversity of directors will improve the representation and accountability of boards, bringing new dimensions to board discussions and decision making. Companies should broaden the search to recruit non-executives to include open advertising and the process for board appointments should be transparent and formalised in a board nomination policy. Companies should have a diversity and inclusion policy which references gender, ethnicity, age, skills and experience and how this is considered in the formulation of the board. The policy should give insight into how diversity is being addressed not only at board level but throughout the company, it should reflect the demographic/ethnic makeup of the countries a company is active in and be disclosed in the Annual Report.

We support the government-backed Davies report, Hampton Alexander and Parker reviews, which set goals for UK companies regarding the representation of women and ethnic minorities on boards, executive teams and senior management. Therefore, in developed markets without relevant legal requirements, we expect boards to be composed of at least 33% female directors. Where relevant, this threshold will be rounded down to account for board size. Recognising varying market practices, we generally expect emerging market and Japanese companies to have at least one female on the board. We will vote against the chair of the nomination committee where this is not the case and there is no positive momentum or progress. On ethnic diversity, we will vote against the chair of the nomination committee at FTSE 100 companies where the Board does not have at least one person from an ethnic minority background, unless there are mitigating circumstances or plans to address this have been disclosed.

Succession planning

We expect the board to disclose its policy on succession planning, the factors considered and where decision-making responsibilities lie. A succession policy should form part of the terms of reference for a formal nomination committee, comprised solely of independent directors and headed by the Chair or Senior Independent Non-executive Director except when it is appointing the Chair's successor. External advisors may also be employed.

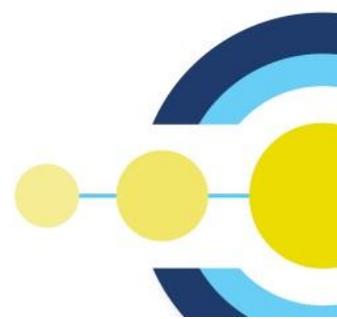

Directors' availability and attendance

It is important that directors have sufficient time to devote to the company's affairs; therefore, full time executives should not hold more than one non-executive position in a FTSE 100 company, or similar size company in other regions; nor the chairmanship of such a company. In the remaining instances, directors working as full-time executives should serve on a maximum of two publicly listed company boards.

With regard to non-executive directors, there can be no hard and fast rule on the number of positions that are acceptable: much depends upon the nature of the post and the capabilities of the individual. Shareholders need to be assured that no individual director has taken on too many positions. Full disclosure should be made in the annual report of directors' other commitments and attendance records at formal board and committee meetings. A director should attend a minimum of 75% of applicable board and committee meetings to ensure commitment to responsibilities at board level.

Re-election

For a board to be successful it needs to ensure that it is suitably diverse with a range of skills, experience and knowledge. There is a requirement for non-executive directors to be independent to appropriately challenge management. To achieve this, boards need to be regularly refreshed to deal with issues such as stagnant skill sets, lack of diversity and excessive tenure; therefore, all directors should be subject to re-election annually, or in-line with local best practice. As representatives of shareholders, directors should preferably be elected using a majority voting standard. In cases where an uncontested election uses the

plurality¹ voting standard without a resignation policy, we will hold the relevant Governance Committee accountable by voting against the Chair of this committee.

Board evaluation

A requisite of good governance is that boards have effective processes in place to evaluate their performance and appraise directors at least once a year. The annual evaluation should consider its composition, diversity and how effectively members work together to achieve objectives. As part of the evaluation, boards should consider whether directors possess the necessary expertise to address and challenge management on key strategic topics. These strategic issues and important areas of expertise should be clearly outlined in reporting on the evaluation. The board should disclose the process for evaluation and, as far as reasonably possible, any material issues of relevance arising from the conclusions and any action taken as a consequence. Individual director evaluation should demonstrate the effective contribution of each director. An internal evaluation should take place annually with an external evaluation required at least every three years.

Stakeholder engagement

Companies should take into account the interests of and feedback from stakeholders which includes the workforce. Considering the differences in best practice across markets, companies should have an appropriate system in place to engage with employees.

Engagement and dialogue with shareholders on a regular basis are key for companies; being a way to discuss governance, strategy, and other significant issues. Companies should engage with shareholders ahead of the AGM in order that high votes against resolutions can be avoided where possible.

Where a company with a single share class structure has received 20% votes against a proposal at a previous AGM, a comprehensive shareholder and stakeholder consultation should be initiated. A case-by-case approach will be taken for companies with a dual class structure where a significant vote against has been received. Engagement efforts and findings, as well as company responses, should be clearly reported on and lead to tangible improvement. Where companies fail to do so, the relevant board committees or members will be held to account.

Directors' remuneration

Shareholders at UK companies have two votes in relation to pay; the annual advisory vote on remuneration implementation which is non-binding, and the triennial vote on forward-looking pay policy which is binding. If a company does not receive a majority of shareholder support for the pay policy, it is required to table a resolution with a revised policy at the next annual meeting.

It must be noted that remuneration structures are varied, with not one model being suitable for all companies; however, there are concerns over excessive remuneration and the overall quantum of pay. Research shows that high executive pay does not systematically lead to better company performance. Excessive rewards for poor performance are not in the best interests of a company or its shareholders. Remuneration levels should be sufficient to attract, motivate and retain quality management but should not be excessive compared to salary

¹¹ A plurality vote means that the winning candidate only needs to get more votes than a competing candidate. If a director runs unopposed, he or she only needs one vote to be elected.

levels within the organisation and with peer group companies. There is a clear conflict of interest when directors set their own remuneration in terms of their duty to the company, accountability to shareholders and their own self-interest. It is therefore essential that the remuneration committee is comprised solely of non-executive directors and complies with the market independence requirement.

Remuneration has serious implications for corporate performance in terms of providing the right incentives to senior management, in setting performance targets, and its effect on the morale and motivation of employees. Corporate reputation is also at risk. Remuneration policy should be sensitive to pay and employee conditions elsewhere in the company, especially when determining annual salary increases.

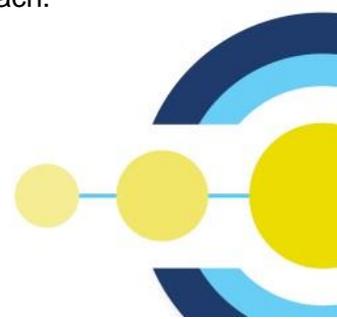

Where companies are potentially subject to high levels of environmental and societal risk as part of its business, the remuneration committee should also consider linking relevant metrics and targets to remuneration to focus management on these issues. The selection of these metrics should be based on a materiality assessment that also guides the company's overall sustainability strategy. If environmental or social topics are incorporated in variable pay plans, the targets should set stretch goals for improved ESG performance, address achievements under management's control, and avoid rewarding management for basic expected behaviour. Where relevant, minimum ESG standards should instead be incorporated as underpins or gateways for incentive pay. If the remuneration committee determines that the inclusion of environmental or social metrics would not be appropriate, a clear rationale for this decision should be provided in the remuneration report.

The compensation provided to non-executive directors should reflect the role and responsibility. It should be structured in a manner that does not compromise independence, enhancing objectivity and alignment with shareholders' interests. Non-executive directors should, therefore, not be granted performance-based pay. Although we would not expect participation in Long-term Incentive Plans (LTIPs), we are conscious that in some exceptional instances non-executives may be awarded stock, however the proportion of pay granted in stock should be minimal to avoid conflicts of interest.

To ensure accountability there should be a full and transparent disclosure of directors' remuneration with the policy published in the annual report and accounts. The valuation of benefits received during the year, including share options, other conditional awards and pension benefits, should be provided. Companies should also be transparent about the ratio of their CEO's pay compared to the median, lower and upper quartiles of their employees.

- **Annual bonus**

Bonuses should reflect individual and corporate performance targets which are sufficiently challenging, ambitious and linked to delivering the strategy of the business and performance over the longer-term. Bonuses should be set at an appropriate level of base salary and should be capped. Provisions should be in place to reduce or forfeit the annual bonus where the company has experienced a significant negative event. For large cap issuers, we expect the annual bonus to include deferral of a portion of short-term payments into long-term equity scheme or equivalent. We will also encourage other companies to take this approach.

• Long-term incentives

Remuneration policies have over time become more and more complex making them difficult for shareholders to adequately assess. Border to Coast therefore encourages companies to simplify remuneration policies.

Performance-related remuneration schemes should be created in such a way to reward performance that has made a significant contribution to shareholder value. Poorly structured schemes can result in senior management receiving unmerited rewards for substandard performance. This is unacceptable and could adversely affect the motivation of other employees.

Incentives are linked to performance over the longer-term in order to create shareholder value. If restricted stock units are awarded under the plan, the vesting period should be at least three years to ensure that the interests of both management and shareholders are aligned in the long-term. Executives' incentive plans should include both financial and non-financial metrics and targets that are sufficiently ambitious and challenging. Remuneration should be specifically linked to stated business objectives and performance indicators should be fully disclosed in the annual report.

The performance basis of all such incentive schemes under which benefits are potentially payable should be clearly set out each year, together with the actual performance achieved against the same targets. We expect clawback or malus provisions to be in place for all components of variable compensation. We encourage Executive Directors to build a significant shareholding in the company to ensure alignment with the objectives of shareholders. These shares should be held for at least two years post exit.

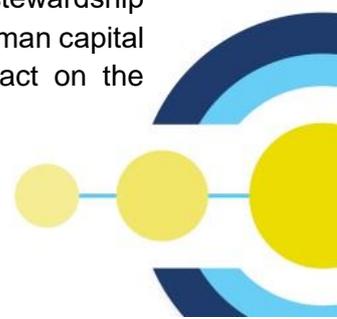

The introduction of incentive schemes to all employees within a firm is encouraged and supported as this helps all employees understand the concept of shareholder value.

Directors' contracts

Directors' service contracts are also a fundamental part of corporate governance considerations. Therefore, all executive directors are expected to have contracts that are based upon no more than twelve months' salary. Retirement benefit policies of directors should be aligned with those of the majority of the workforce, and no element of variable pay should be pensionable. The main terms of the directors' contracts including notice periods on both sides, and any loans or third-party contractual arrangements such as the provision of housing or removal expenses, should be declared within the annual report. Termination benefits should be aligned with market best practice.

Corporate reporting

Companies are expected to report regularly to shareholders in an integrated manner that allows them to understand the company's strategic objectives. Companies should be as transparent as possible in disclosures within the Report and Accounts. As well as reporting financial performance, business strategy and the key risks facing the business, companies should provide additional information on ESG issues that also reflect the directors' stewardship of the company. These could include, for example, information on a company's human capital management policies, its charitable and community initiatives and on its impact on the environment in which it operates.

Every annual report should include an environmental section, which identifies key quantitative data relating to energy and water consumption, emissions and waste etc., explains any contentious issues and outlines reporting and evaluation criteria. It is important that the risk areas reported upon should not be limited to financial risks.

We will encourage companies to report and disclose in line with the Financial Stability Board's Task Force on Climate-related Financial Disclosures (TCFD) recommendations, and the Workforce Disclosure Initiative in relation to human capital reporting.

Audit

The audit process must be objective, rigorous and independent if it is to provide assurance to users of accounts and maintain the confidence of the capital markets. To ensure that the audit committee can fulfil its fiduciary role, it should be established as an appropriate committee composition with at least three members who are all independent non-executive directors and have at least one director with a relevant audit or financial background. Any material links between the audit firm and the client need to be highlighted, with the audit committee report being the most appropriate place for such disclosures. Audited financial statements should be published in a timely manner ahead of votes being cast at annual general meetings.

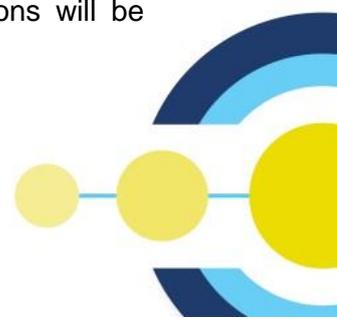

FTSE 350 companies should tender the external audit contract at least every ten years. Reappointment of the same firm with rotation of the audit partner, will not be considered as sufficient. If an auditor has been in place for more than ten fiscal years, their appointment will not be supported. For the wider market, the external audit contract should be put out to tender at least every ten years. Where an auditor has resigned, an explanation should be given. If the accounts have been qualified or there has been non-compliance with legal or regulatory requirements, this should be drawn to shareholders' attention in the main body of the annual report. If the appropriate disclosures are not made, the re-appointment of the audit firm will not be supported.

Non-Audit Fees

There is concern over the potential conflict of interest between audit and non-audit work when conducted by the same firm for a client. Companies must therefore make a full disclosure where such a conflict arises. There can be legitimate reasons for employing the same firm to do both types of work, but these need to be identified. As a rule, the re-appointment of auditors will not be supported where non-audit fees are considerably in excess of audit fees in the year under review, and on a three-year aggregate basis, unless sufficient explanation is given in the accounts.

Political donations

There are concerns over the reputational risks and democratic implications of companies becoming involved in funding political processes, both at home and abroad. Companies should disclose all political donations, demonstrate where they intend to spend the money and that it is the interest of the company and shareholders. Where these conditions are not met, or there is insufficient disclosure that the money is not being used for political party donations, political donations will be opposed. Any proposals concerning political donations will be opposed.

Lobbying

A company should be transparent and publicly disclose direct lobbying, and any indirect lobbying through its membership of trade associations. We will assess shareholder proposals regarding lobbying on a case-by-case basis; however, we will generally support resolutions requesting greater disclosure of trade association and industry body memberships, any payments and contributions made, and requiring alignment of company and trade association values. This includes expectations of companies to be transparent regarding lobbying activities in relation to climate change and to assess whether a company's climate change policy is aligned with the industry association(s) it belongs to.

Shareholder rights

As a shareowner, Border to Coast is entitled to certain shareholder rights in the companies in which it invests (Companies Act 2006). Boards are expected to protect such ownership rights.

- **Dividends**

Shareholders should have the chance to approve a company's dividend policy and this is considered best practice. The resolution should be separate from the resolution to receive the report and accounts. Failure to seek approval would elicit opposition to other resolutions as appropriate unless there is a clearly disclosed capital management and allocation strategy in public reporting.

- **Voting rights**

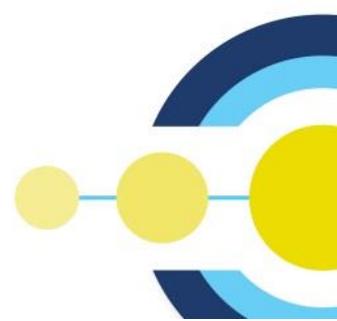

Voting at company meetings is the main way in which shareholders can influence a company's governance arrangements and its behaviour. Shareholders should have voting rights in equal proportion to their economic interest in a company (one share, one vote). Dual share structures which have differential voting rights are disadvantageous to many shareholders and should be abolished. We will not support measures or proposals which will dilute or restrict our rights.

- **Authority to issue shares**

Companies have the right to issue new shares in order to raise capital but are required by law to seek shareholders' authority. Such issuances should be limited to what is necessary to sustain the company and not be in excess of relevant market norms.

- **Disapplication of Pre-emption Rights**

Border to Coast supports the pre-emption rights principle and considers it acceptable that directors have authority to allot shares on this basis. Resolutions seeking the authority to issue shares with and without pre-emption rights should be separate and should specify the amounts involved, the time periods covered and whether there is any intention to utilise the authority.

Share Repurchases

Border to Coast does not necessarily oppose a company re-purchasing its own shares but it recognises the effect such buy backs might have on incentive schemes where earnings per share measures are a condition of the scheme. The impact of such measures should be reported on. It is important that the directors provide a full justification to demonstrate that a share repurchase is the best use of company resources, including setting out the criteria for calculating the buyback price to ensure that it benefits long-term shareholders.

Memorandum and Articles of Association

Proposals to change a company's memorandum and articles of association should be supported if they are in the interests of Border to Coast, presented as separate resolutions for each change, and the reasons for each change provided.

If proposals to adopt new articles or amend existing articles might result in shareholders' interests being adversely affected, we will oppose the changes.

Mergers and acquisitions

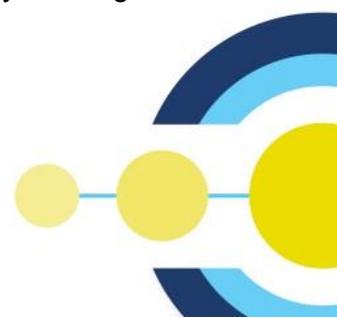

Border to Coast will normally support management if the terms of the deal will create rather than destroy shareholder value and makes sense strategically. Each individual case will be considered on its merits. Seldom will compliance with corporate governance best practice be the sole determinant when evaluating the merits of merger and acquisition activity, but full information must be provided to shareholders on governance issues when they are asked to approve such transactions. Recommendations regarding takeovers should be approved by the full board.

Articles of Association and adopting the report and accounts

It is unlikely that Border to Coast will oppose a vote to adopt the report and accounts simply because it objects to them per se; however, there may be occasions when we might vote against them to lodge dissatisfaction with other points raised within this policy statement. Although it is a blunt tool to use, it can be an effective one especially if the appropriate Chair or senior director is not standing for election.

Virtual Shareholder General Meetings

Many companies are considering using electronic means to reach a greater number of their shareholders. An example of this is via a virtual annual general meeting of shareholders where a meeting takes place exclusively using online technology, without a corresponding in-person meeting. There are some advantages to virtual only meetings as they can increase shareholder accessibility and participation; however, they can also remove the one opportunity shareholders have to meet face to face with the Board to ensure they are held to account. We would expect an electronic meeting to be held in tandem with a physical meeting. If extraordinary circumstances rule out a physical meeting, we expect the company to clearly outline how shareholders' rights to participate by asking questions and voting during the meeting are protected. Any amendment to a company's Articles to allow virtual only meetings without these safeguards will not be supported.

Shareholder Proposals

We will assess shareholder proposals on a case-by-case basis. Consideration will be given as to whether the proposal reflects Border to Coast's Responsible Investment policy, is balanced and worded appropriately, and supports the long-term economic interests of shareholders.

Shareholder proposals are an important tool to improve transparency. Therefore, we will, when considered appropriate, support resolutions requesting additional reporting or reasonable action that is in shareholders' best interests on material business risk, ESG topics, climate risk and lobbying.

Climate change

We expect companies with high emissions or in high emitting sectors to have a climate change policy in place, which at minimum includes greenhouse gas emission reduction targets and disclosure of Scope 1 and 2 emissions. We use the Transition Pathway Initiative (TPI)² toolkit and the Climate Action 100+ Net Zero Benchmark (CA100+ NZB) to assess our listed equities investments. Both tools enable us to assess how companies are managing climate change, the related business risk and the progress being made. Where a company in a high emitting sector receives a score of zero or one by the TPI, or fails to meet the expectations above, we will vote against the Chair of the board if we consider the company is not making progress. Where a company covered by CA100+ NZB fails the first four indicators of the Benchmark which includes a net-zero by 2050 (or sooner) ambition, and short, medium and long-term emission reduction targets, we will also vote against the Chair of the board.

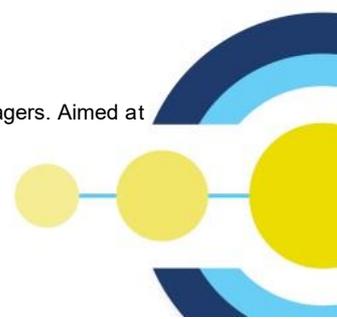

Investment trusts

Border to Coast acknowledges that issues faced by the boards of investment companies are often different to those of other listed companies. The same corporate governance guidelines do not necessarily apply to them; for example, investment companies can operate with smaller boards. However, the conventions applying to audit, board composition and director independence do apply.

The election of any representative of an incumbent investment manager onto the board of a trust managed or advised by that manager will not be supported. Independence of the board from the investment manager is key, therefore management contracts should not exceed one year and should be reviewed every year. In broad terms, the same requirements for independence, diversity and competence apply to boards of investment trusts as they do to any other quoted companies.

We may oppose the adoption of the report and accounts of an investment trust where there is no commitment that the trust exercises its own votes, and there is no explanation of the voting policy.

² The Transition Pathway Initiative ('TPI') is a global initiative led by asset owners and supported by asset managers. Aimed at investors, it is a free-to-use tool that assesses how prepared companies are for the low carbon transition.

Climate Change Policy

Border to Coast Pensions Partnership

Policy Owner: The Chief Investment Officer
Live from: 1 October 2021

Climate Change Policy

This Climate Change Policy details the approach that Border to Coast Pensions Partnership will follow in fulfilling its commitment to managing the risks and opportunities associated with climate change across the assets managed on behalf of our Partner Funds.

1 Introduction

Border to Coast Pensions Partnership Ltd is an FCA regulated and authorised investment fund manager (AIFM), operating investment funds for its eleven shareholders which are Local Government Pension Scheme funds (Partner Funds). As a customer-owned, customer-focused organisation, our purpose is to make a sustainable and positive difference to investment outcomes for our Partner Funds. Pooling gives us a stronger voice and, working in partnership with our Partner Funds and across the asset owner and asset management industry, we aim to deliver cost effective, innovative and responsible investment thereby enabling sustainable, risk-adjusted performance over the long-term.

1.1 Policy framework

Border to Coast has developed this Climate Change Policy in collaboration with our Partner Funds. It sits alongside the Responsible Investment Policy and other associated policies, developed to ensure clarity of approach and to meet our Partner Funds' fiduciary duty and fulfil their stewardship requirements. This collaborative approach resulted in the RI policy framework illustrated below with the colours demonstrating ownership of the various aspects of the framework:

RI Policy Framework

2 Policy overview

2.1 Our views and beliefs on climate change

The world is warming, the climate is changing, and the scientific consensus is that this is due to human activity, primarily the emissions of carbon dioxide (CO₂) from burning fossil fuels. Our planet has warmed by over 1°C relative to the pre-industrial average temperature, and we are starting to experience the significant effects of this warming.

Atmospheric CO₂ is at unprecedented levels in human history. Further warming will occur, and so adaptation will be required. The extent of this further warming is for humankind to collectively decide, and the next decade is critical in determining the course. If the present course is not changed and societal emissions of CO₂ and other greenhouse gases (GHG) are not reduced to mitigate global warming, scientists have suggested that global society will be catastrophically disrupted beyond its capability to adapt, with material capital market implications.

Recognising the existential threat to society that unmitigated climate change represents, in 2015, the nations of the world came together in Paris and agreed to limit global warming to 2°C and to pursue efforts to limit the temperature increase to 1.5°C. A key part of the Paris Agreement was an objective to make finance flows consistent with a pathway towards low GHG emissions and climate resilience. This recognises the critical role asset owners and managers play, reinforcing the need for us and our peers to drive and support the pace and scale of change required.

In 2018, the Intergovernmental Panel on Climate Change (IPCC) published a special report, “Global warming of 1.5°C”¹, which starkly illustrated how critical successful adaptation to limit global warming to 1.5°C is. The report found that limiting global warming to 1.5°C would require “rapid and far-reaching” transitions in land, energy, industry, buildings, transport, and cities. This includes a need for emissions of carbon dioxide to fall by approximately 45 percent from 2010 levels by 2030, and reach ‘net zero’ around 2050. We support this scientific consensus; recognising that the investments we make, in every asset class, will both impact climate change and be impacted by climate change.

2.2 Why climate change is important to us

The purpose of embedding sustainability into our actions is twofold: we believe that considering sustainable measures in our investment decisions will increase returns for our Partner Funds, in addition to positively impacting the world beneficiaries live in.

Our exposure to climate change comes predominantly from the investments that we manage on behalf of our Partner Funds. We develop and operate a variety of internally and externally managed investments across a range of asset classes both in public and private markets for our Partner Funds to invest in.

We try to mitigate these exposures by taking a long-term approach to investing as we believe that businesses that are governed well and managed in a sustainable way are more resilient, able to survive shocks and have the potential to provide better financial returns for investors. Climate change can have a material impact on the value of financial assets and on the long-term performance of investments, and therefore needs to be considered across all asset classes in order to better manage risk and generate sustainable, long-term returns.

Climate change is a systemic risk which poses significant investment risks, but also opportunities, with the potential to impact long-term shareholder value. Transition to a low carbon economy will affect some sectors more than others, and within sectors there are likely to be winners and losers, which is why divesting from and excluding entire sectors may not be appropriate. We actively consider how climate change, the shifting regulatory environment and potential macroeconomic impact will affect investments. We believe that we have the responsibility to contribute and support the transition to a low carbon economy in order to positively impact the world in which pension scheme beneficiaries live in.

Our climate change strategy is split into four pillars: **Identification and Assessment, Investment Strategy, Engagement and Advocacy, and Disclosures and Reporting**. We will continue to monitor scientific research in this space; evolving and adapting our strategy in order to best respond to the impacts of climate change.

¹ <https://www.ipcc.ch/sr15/>

2.3 How we execute our climate change strategy

We integrate climate change risks within our wider risk management framework and have robust processes in place for the identification and ongoing assessment of climate risks.

We consider climate change risks and opportunities within our investment decision making process.

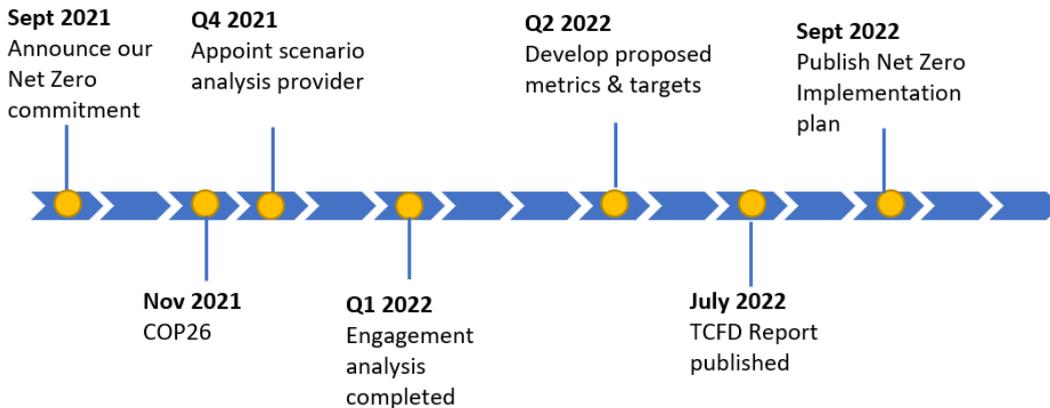

Border to Coast, as a large investor, aims to influence companies to adapt and articulate their climate change strategy, to enable them to be well prepared for the transition to a low carbon economy. This in turn will improve investment outcomes.

We are committed to transparency regarding our climate change issues and activities.

2.4 Roadmap

The roadmap demonstrates the milestones to implement the policy over the next 12 months.

3 Climate change strategy and governance

3.1 Our ambition – Net Zero

Our climate change strategy recognises that there are financially material investment risks and opportunities associated with climate change which we need to manage across our investment portfolios. We have therefore committed to a net zero carbon emissions target by 2050 at the latest for our assets under management, in order to align with efforts to limit temperature increases to under 1.5°C.

We recognise that assessing and monitoring climate risk is under constant development, and that tools and underlying data are developing rapidly. There is a risk of just focusing on carbon emissions, a backwards looking metric, and it is important to ensure that metrics we use reflect the expected future state and transition plans that companies have in place or under development. We will continue to assess the metrics and targets used as data and industry standards develop.

As a supporter of the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD), we will continue to embed climate change into our investment process and risk management systems, reporting annually on our progress in the TCFD report.

In support of our Net Zero commitment, we will develop and set out a plan with high-level targets for each of the four supporting pillars of our climate change strategy which will be published in September 2022.

3.2 Governance and implementation

We take a holistic approach to sustainability and responsible investment; it is at the core of our corporate and investment thinking. Sustainability is considered and overseen by the Board and Executive Committee. We have defined policies and procedures that demonstrate our commitment to managing climate change risk, including this Climate Change Policy, our Responsible Investment Policy and Corporate Governance & Voting Guidelines which can be found on our [website](#).

3.3 Division of roles and responsibilities

The Board determines the Company's overall strategy for climate change and with support from the Board Risk Committee, oversees the identification and management of risk and opportunities. The Board is responsible for the oversight of climate related impacts as part of its remit with respect to Border to Coast's management of investments. The Board approves the Responsible Investment strategy and policies, which includes the Climate Change Policy. Updates on Responsible Investment are presented to the Board at regular intervals, this includes activities related to climate change. The Board reviews and approves the TCFD report prior to publication.

The Climate Change Policy is owned by Border to Coast and created after collaboration and engagement with our Partner Funds. We will, where needed, take appropriate advice in order to further develop and implement the policy.

The Chief Investment Officer (CIO) is responsible for the implementation and management of the Climate Change Policy, with oversight from the Investment Committee, which is chaired by the Chief Executive Officer. Each year the CIO reviews the implementation of the policy and reports any findings to the Board. The policy is reviewed annually, taking into account evolving best practice, and updated as needed.

The Investment Team, which includes a dedicated Responsible Investment Team, works to manage environmental, social and governance (ESG) issues including climate change. Climate change is one of our responsible investment priorities and sits at the core of our sustainability dialogue. We are on the front foot with UK, European and Global climate change regulation, horizon scanning for future regulation and actively participate in discussions around future climate policy and legislation through our membership of industry bodies.

3.4 Training

Border to Coast's Board and colleagues maintain appropriate skills in responsible investment, including climate change, maintaining and increasing knowledge and understanding of climate change risks, available risk measurement tools, and policy and regulation. Where necessary expert advice is taken from suitable climate change specialists to fulfil our responsibilities. We also offer our Partner Funds training on climate change related issues.

3.5 Regulatory change management

Regulatory change horizon scanning is the role of the Compliance function, which regularly scans for applicable regulatory change. This includes FCA, associated UK regulations, and wider regulation including Responsible Investment, and climate change. The relevant heads of functions and departments, as subject matter experts, also support the process and a tracker is maintained to ensure applicable changes are appropriately implemented.

4 Identification and assessment

4.1 How we identify climate-related risks

The Identification and Assessment pillar is a key element of our climate change strategy. Our investment processes and approach towards engagement and advocacy reflect our desire to culturally embed climate change risk within our organisation and drive change in the industry.

The risk relating to climate change is integrated into the wider Border to Coast risk management framework. The Company operates a risk management framework consistent with the principles of the 'three lines of defence' model, with external assurance providers acting as a fourth line. Risks to the Company are owned and managed by the business or functional areas (1st Line of Defence) and are subject to oversight and challenge by the Risk and Compliance Function (2nd Line of Defence) and independent assurance by Internal Audit (3rd Line of Defence).

We consider both the transition and physical risks of climate change. The former relates to the risks (and opportunities) from the realignment of our economic system towards low-carbon, climate-resilient and carbon-positive solutions (e.g. via regulations). The latter relates to the physical impacts of climate change (e.g. rising temperatures, changing precipitation patterns, increased risk arising from rising sea levels and increased frequency and severity of extreme weather events).

4.2 How we assess climate-related risks and opportunities

We currently use a number of different tools and metrics to measure and monitor climate risk across portfolios. We acknowledge that this is a rapidly evolving area, and we are developing our analytical capabilities to support our ambition. Carbon data is not available for all equities as not all companies disclose, therefore there is a reliance on estimates. Data is even more unreliable for fixed income and is only just being developed for Private Markets. We will work with our managers and the industry to improve data disclosure and transparency in this area.

We utilise third party carbon portfolio analytics to conduct carbon footprints across equity and fixed income portfolios, analysing carbon emissions, carbon intensity and weighted carbon intensity and fossil fuel exposure when assessing carbon-related risk, on a quarterly basis. The Transition Pathway Initiative² tool and climate Action 100+ Net Zero Company Benchmark analysis is used to support portfolio managers in decision making with respect to net zero assessments. We use research from our partners and specific climate research, along with information and data from initiatives and industry associations we support.

² The Transition Pathway Initiative ('TPI') is a global initiative led by asset owners and supported by asset managers. Aimed at investors, it is a free-to-use tool that assesses how prepared companies are for the low carbon transition.

We are developing climate risk assessment for our listed equity investments that combines several factors to assess overall whether a company is aligned with the Paris Agreement (to limit global warming to 2°C), so that we can both engage appropriately with the company on their direction of travel and also track our progress. This will necessarily be an iterative process, recognising that data, tools and methodologies are developing rapidly.

We are reviewing how we conduct scenario analysis across our portfolios, evaluating tools and external providers and different scenarios and expect to have this in place during 2022.

We are using the Net Zero Investment Framework to support us in implementing our strategy to being Net Zero by 2050. Work will be undertaken during 2022 to assess and define any targets based around this commitment.

5 Investment strategy

5.1 Our approach to investing

We believe that climate change should be systematically integrated into our investment decision-making process to identify related risks and opportunities. This is critical to our long-term objective of improving investment outcomes for our Partner Funds.

Border to Coast offers Partner Funds a variety of internally and externally managed investment funds covering a wide-ranging set of asset classes with different risk-return profiles. Partner Funds then choose the funds which support their strategic asset allocation.

Partner Funds retain responsibility for strategic asset allocation and setting their investment strategy, and ultimately their strategic exposure to climate risk. Our implementation supports Partner Funds to deliver on their fiduciary duty of acting in the best interests of beneficiaries.

We consider climate change risks and opportunities in the process of constructing and developing investment funds. Climate change is also considered during the external manager selection and appointment process. We monitor and challenge our internal and external managers on their portfolio holdings, analysis, and investment rationale in relation to climate-related risks.

We monitor a variety of carbon metrics, managing climate risk in portfolios through active voting and engagement, whilst also looking to take advantage of the long-term climate-related investment opportunities.

We believe in engagement rather than divestment and that by doing so can effect change at companies. Our investment approach is not to divest or exclude entire sectors, however there may be specific instances when we will look to sell or not invest in some industries based on investment criteria, the investment time horizon and if there is limited scope for successful engagement. Using these criteria and due to the potential for stranded assets, we interpret this to cover pure coal and tar sands companies and will therefore not invest in these companies. Any companies excluded will be monitored with transition plans assessed for potential reinstatement.

5.2 Acting within different asset classes

We integrate climate change risks and opportunities into our investment decisions within each asset class. The approach we take for each asset class is tailored to the nature of the risk and our investment process for that asset class. The timeframe for the impact of climate change can vary, leading to differing risk implications depending on the sector, asset class and region. These variations are considered at the portfolio level. This policy gives our overall approach and more detail on the processes and analysis can be found in our annual TCFD report.

Climate risks and opportunities are incorporated into the stock analysis and decision-making process for **listed equities** and **fixed income**. Third party ESG and carbon data are used to assess individual holdings. We also use forward looking metrics including the TPI ratings and Climate Action 100+ Net Zero Company Benchmark to assess companies' transition progress. Internal, sell-side and climate specific research, and engagement information are also utilised.

Carbon footprints are conducted relative to the benchmark.

For our **alternative funds**, ESG risks, which includes climate change, are incorporated into the due diligence process including ongoing monitoring. Across both funds and co-investments, we consider the impact of carbon emissions and climate change when determining our asset allocation across geographies and industries. We assess and monitor if our GPs track portfolio metrics in line with TCFD recommendations. Climate change presents real financial risks to portfolios but also provides opportunities with significant amounts of private capital required to achieve a low-carbon transition. We are therefore considering the role private markets will play in managing transition risk and how we can invest in climate change opportunities as part of our Private Markets offering.

5.3 Working with external managers

Assessing climate risk is an integral part of the external manager selection and appointment process. It also forms part of the quarterly screening and monitoring of portfolios and the annual manager reviews. We monitor and review our fund managers on their climate change approach and policies. Where high emitting companies are held as part of a strategy managers are challenged and expected to provide strong investment rationale to substantiate the holding. We encourage managers to support collaborative initiatives on climate, and to report in line with the TCFD recommendations. In addition, we assess and monitor where managers are making net zero commitments.

6 Engagement and advocacy

As a shareholder, we have responsibility for effective stewardship of all companies or entities in which we invest, whether directly or indirectly. We take the responsibilities of this role seriously, and we believe success for our climate ambition can be supported by effective stewardship and governance oversight.

6.1 Our approach to engagement

As a long-term investor and representative of asset owners, we will hold companies and asset managers to account regarding environmental, social and governance issues, including climate change factors, that have the potential to impact corporate value. We support engagement over divestment as we believe that constructive dialogue with companies in which we invest is more effective than excluding companies from the investment universe. If engagement does not lead to the desired results, we have an escalation process which forms part of our RI Policy. We practice active ownership through voting, monitoring companies, engagement and litigation. Through meetings with company directors, we seek to work with and influence investee companies to encourage positive change. Climate is one of our key engagement themes. We believe it is vital we fully understand how companies are dealing with this challenge, and feel it is our duty to hold the boards of our investee companies to account.

Our primary objective from climate related engagement is to encourage companies to adapt their business strategy in order to align with a low carbon economy and reaching Net-Zero by 2050 or sooner. The areas we consider in our engagement activities include climate governance; strategy and Paris alignment; command of the climate subject; board oversight and incentivisation; TCFD disclosures and scenario planning; scope 3 emissions and the supply chain; and exposure to climate-stressed regions.

In order to increase our influence with corporates and policy makers we work collaboratively with other like-minded investors and organisations. This is achieved through actively supporting investor RI initiatives and collaborating with various other external groups on climate related issues, including the Institutional Investors Group on Climate Change, Climate Action 100+, the UN-supported Principles for Responsible Investment, the Local Authority Pension Fund Forum and the Transition Pathway Initiative.

In particular, we are currently focusing on the following actions:

- Vote against company Chairs in high emitting sectors where the climate change policy does not meet our minimum standards, and/or rated Level 0 or 1 by the TPI, where there is no evidence of a positive direction of travel. Our voting principles are outlined in our Corporate Governance & Voting Guidelines. We are also transparent with all our voting activity and publish our quarterly voting records on our [website](#).
- Support climate-related resolutions at company meetings which we consider reflect our Climate Change Policy. We will co-file shareholder resolutions at company AGMs on climate risk disclosure, after conducting due diligence, that we consider to be of institutional quality and consistent with our Climate Change Policy.
- Engage with companies in relation to business sustainability and disclosure of climate risk in line with the TCFD recommendations.
- Encourage companies to publish targets and report on steps taken to reduce greenhouse gas emissions.
- Work collaboratively with other asset owners in order to strengthen our voice and make a more lasting impact for positive change. Engagement is conducted directly, through our engagement partner Robeco and through our support of collaborations. We also expect our external asset managers to engage with companies on climate-related issues.
- Use carbon footprints and the TPI toolkit to assess companies and inform our engagement and voting activity. This will enable us to prioritise shareholder engagement, set timeframes and monitor progress against our goals.
- Engage collaboratively alongside other institutional investors with policy makers through membership of the Institutional Investor Group on Climate Change ('IIGCC'). We will engage with regulators and peer groups to advocate for improved climate related disclosures and management in the pensions industry and wider global economy.

7 Disclosures and reporting

Transparency is one of our key organisational values. We disclose our RI activity on our website, publishing quarterly stewardship and voting reports, annual RI & Stewardship reports and our TCFD report. We are committed to improving transparency and reporting in relation to our RI activities, which include climate change related activities. We will keep our Partner Funds and our stakeholders informed on our progress of implementing the Climate Change Policy, as well as our exposure to the risks and opportunities of climate change.

During 2021 and 2022 we will be focusing on the following actions:

- Reviewing on an annual basis how we are implementing this Climate Change Policy. The findings will be reported to our Board and Partner Funds, as well as made publicly accessible through our TCFD and Stewardship reports and other disclosures.
- Reporting in line with the TCFD recommendations on an annual basis, including reporting on the actions undertaken with regards to climate change. We published our first [TCFD report](#) in 2020 and will look to evolve and refine our TCFD report, reflecting further developments that we undertake as part of implementation of this policy.
- Disclosing our voting activity.
- Reporting on engagement and RI activities, including climate change, to the Partner Funds quarterly and in our annual RI & Stewardship report.
- Disclosing climate metrics and targets that help to analyse the overall exposure of our portfolios to the risks and opportunities presented by climate mitigation and adaptation.
- Reporting our progress against the Net Zero Investment Framework.
